

## Environmental Management Systems:

### Environmental Audits:

- ✦ establish environmental baseline
- ✦ identify present and past environmental impacts
- ✦ ensure compliance with all applicable regulations
- ✦ ensure adherence to internal environmental policies
- ✦ identify potential environmental liability
- ✦ develop a database to track environmental progress
- ✦ recommend ways to incorporate audits into ongoing operations
- ✦ establish means to continuously improve environmental performance.

### Environmental Impact Assessments:

- ✦ minimize future environmental impacts of new developments
- ✦ determine criteria for EIA including mandatory and discretionary requirements
- ✦ conduct review and obtain technical information as necessary
- ✦ consult stakeholders
- ✦ develop recommendations and final report
- ✦ develop basis for decision to proceed, change or cancel the project

### State of Environment Reporting:

- ✦ develop a system to track environmental status
- ✦ clearly communicate progress to residents

## Integrated Waste Management:

### Waste Management System Reviews:

- ✦ evaluate all existing solid waste management systems
- ✦ interview waste management staff and stakeholders
- ✦ conduct public consultation
- ✦ prepare a preliminary full cost analysis
- ✦ develop recommendations for action plan

### Compost Systems:

- ✦ evaluate opportunities for reducing organic waste
- ✦ identify appropriate systems, technology and compost “recipe”
- ✦ develop a marketable product

For innovative  
environmental solutions  
and qualified staff, work  
completed on time and  
on budget
